

## Candidate Fit Parameters

- 1  $p$ : Effects on  $\Delta p$  probably scale with pressure, so fitting functions of the form  $\frac{\Delta p}{p} = f(\dots)$  seems appropriate and provided improved fits
- 2  $q$  or  $q/p$
- 3  $\alpha$  or ADIFR/QCR
- 4  $\beta$  or BDIFR/QCR - no significant dependence found, either  $\beta$  or  $|\beta|$
- 5  $M$
